

LibertyNET System Profile

Information
Solutions
for the NET

The LibertyNET Concept

LibertyNET™ software is designed to provide easy document and information management from a variety of sources. The information may be scanned in, creating an “electronic photocopy” of an original paper document; or even received as a fax. Documents may be monochrome or color images, word processing files, CAD/CAM drawings or graphic files.

LibertyNET encompasses a plethora of options for scanning & faxing multiple file types, includes web server options, full searching options, markups/annotations, import/exporting files, digital signatures, work flow systems, optical server, E-Commerce functionality, and much more.

Intuitive, Microsoft Windows Interface

LibertyNET's consistent, point and click approach makes the system easy to learn and use.

Easily Tailored to Specific Applications & Users

The LibertyNET Application Builder (LAB) is a powerful tool, which allows non-programmers to customize LibertyNET to match application requirements, including security issues.

Flexible Storage Options

LibertyNET can store millions of pages on Magnetic Drives, Optical Disks, RAID, DVD and/or CD-ROM. LibertyNET also supports CD-ROM, Optical, DVD, 5.25" and 12" drives and jukeboxes ranging from 1 to 500 discs.

Support for Optical Character Recognition (OCR) and Intelligent Character Recognition (ICR)

Documents and handwriting can be easily converted from image to text, without leaving LibertyNET.

Full Network Support

LibertyNET's network independent platform allows information to be distributed rapidly within an organization regardless of network environment.

Unique TaskFLO™ Distribution Business Rules

LibertyNET offers internal or Web routing and distribution of documents. Additionally, its business rules engine provides users with the means to intelligently manage documents.

Enterprise Report Management (ERM)

Start with nearly any existing computer output -- reports, data files, screen dumps in the native format your legacy system understands - ASCII, EBCDIC, whatever your application cares to deliver. LibertyNET converts it automatically and accurately, according to standard pre-defined or custom rules you define with the help of LibertyNET's easy-to-use LAB assistant technology.

NETCommunicate™ Internet Server

LibertyNET can function as a complete Internet Server. NETCommunicate allows your documents to be accessed via the World Wide Web, using any commercial browser... no add-ons are required!

...and hundreds of other features!
