

Why LibertyNET?

Information
Solutions
for the NET

LibertyNET is the best turnkey solution available.

Liberty IMS is the leader in enterprise-wide turnkey information management solutions. LibertyNET has a comprehensive array of features including document scanning, importing various documents, numerous search capabilities, TaskFLO™, document markups and annotations, ERM (Enterprise Report Management), and web-enabled information management. The ability to easily configure and grow the system, and solid technical backup is what makes LibertyNET a leader in information management. Hundreds of installations since 1987 include the United Nations, South Coast Air Quality Management District, Pioneer, and many cities, counties, hospitals, law enforcement, legal, manufacturing, trucking/logistics, and insurance companies.

LibertyNET is used by businesses that need multiple workstations across the enterprise and a flexible architecture to streamline individual business needs. LibertyNET offers the applications needed with easy access of information from any desktop or satellite locations. The system administrator has the ability to "build the application" to suit individual needs and preferences. The user gets a tailored application with high-end features, which can be maintained without costly on-site programmers.

The compatibility is already in the code

To keep up with the fast pace of the technology industry, the people at Liberty IMS work strive to keep the software updated with the most compatible information management system available.

New hardware, software, and media are continually tested to insure seamless compatibility for LibertyNET users. Support is provided for all major scanner brands. Liberty IMS's dedication to product development and solid approach to the basic issues of accessibility, security, and ease-of-use have kept the product in the top handful since the beginning of the information management industry in the late '80s.

LibertyNET functions independently in accomplishing the software's wide array of features so there is no need to rely on other products; all of the LibertyNET capabilities of document imaging, web capabilities, and workflow are built right in the LibertyNET code. This crucial feature makes the product reliable and easy to use. It's simply not possible to make multiple products interact as smoothly as a single product containing multiple built-in features.

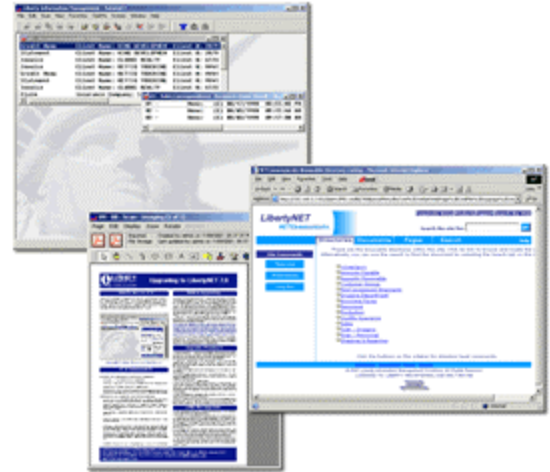

LibertyNET gives systems administrators power and flexibility

LibertyNET is a comprehensive program that promises and delivers a vast amount of power. Its Windows Interface is easy to understand, simple to use, and compatible with all Windows Operating Systems.

In addition to being a complete information management system, LibertyNET easily piggybacks upon existing applications, operating systems and databases. There is no limit to how many file formats or media types that can be accessed by LibertyNET or how big a LibertyNET system can expand. The LibertyNET Application Builder (LAB) is a powerful module that gives system administrators more control and flexibility than other information management systems.

The LibertyNET Application Builder (LAB) allows the network systems administrator to tailor and maintain the LibertyNET system. It is a powerful utility that none of its competitors can match and contributes to making this product the best of its class. The LAB makes it easy to adapt the system to meet the needs of specialized markets like: Education, Financial, Healthcare, Insurance, Government, Law Enforcement, Legal, Manufacturing, and Transportation/Logistics.

All the cutting edge features you can imagine...

Liberty IMS has invested decades of man-hours approaching each technical detail with the same relentless eye for quality.

LibertyNET provides many ways of adding information to a document without modifying the original. Extensive markup and annotation tools allow additions to be stored and tracked on different layers. All information including scanned images, text, voice, or video, can be incorporated in the same system, folder or document.

Key features include:

- ?? Comprehensive document image management
- ?? Enterprise Report Management (ERM)
- ?? Integral full text search capabilities
- ?? Complete set of flexible mark-up and annotation tools
- ?? Efficient Workflow and Routing of Documents
- ?? NETCommunicate Web Server
- ?? Advanced Support for PDF, PNG, ERM data
- ?? Sign & View Digital Signatures
- ?? LibertyNET Application Builder (LAB) flexibility
- ?? Comprehensive and expandable media support (RAID, optical, CD, DVD and more)
- ?? LibertyNETvip™ E-Commerce capabilities

Liberty NETCommunicate? is the most powerful component for information management.

The NETCommunicate module offers unequalled functionality. Being the most popular module, it allows documents to be accessible via the World Wide Web using any commercial browser without additional software. You can access all your information from any desktop or remote/satellite locations. Documents are viewable in real time and host numerous options including: complex searching, markups, annotations, business rules, indexing and digital signatures. The system can be configured to meet precise security demands.

Easily configure a system that matches your needs.

LibertyNET is the best-in-class turnkey information management offering. The LibertyNET System can be configured to meet the needs of the most demanding users, from the smaller company with only a few workstations to the mega enterprise with complex information requirements. LibertyNET Systems are sold through a reseller channel.
