Summary

Be more responsive to the needs of your organization by rapidly configuring lightweight business applications that facilitate case management.
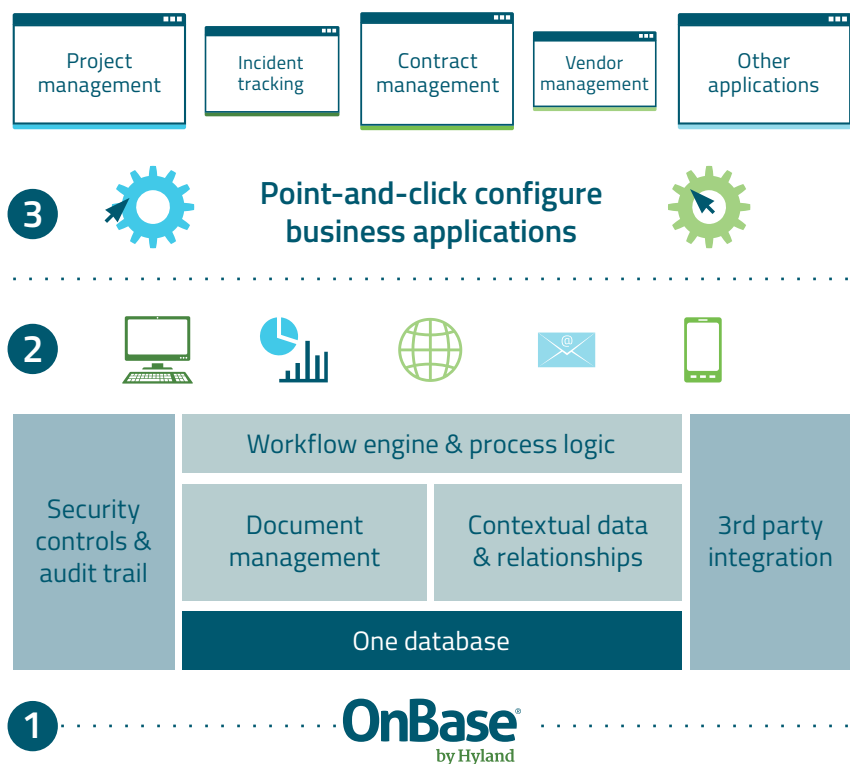

OnBase allows you to point-and-click configure data-driven business applications that support case management and fill the gaps between your line-of-business systems. Minimize the need for costly custom coding, inefficient shared spreadsheets and disconnected point solutions. Replace antiquated departmental databases, including Access and Lotus Notes, with applications that seamlessly connect data, processes and related documents.

By building business applications on top of the comprehensive OnBase platform, you take advantage of robust native functionality (such as document management, automation and security controls) and enhance applications with the entire product suite. One platform scales to support a spectrum of applications across your organization, whether on-premises or in the OnBase Cloud.

Benefits

– **Build business applications at the speed users expect** while meeting corporate demands for governance and control

– **Equip business users to manage cases and knowledge work** by providing access to all data, documents and processes

– **Capture data first then grow the solution over time** as process steps become clearer

– **Minimize the need for costly custom coding and disconnected point solutions** with a point-and-click framework

– **Manage security, upgrades, compliance and maintenance in a single place** with one fully integrated product

– **Scale the OnBase platform** to meet business needs across your organization, maximizing ROI

Design

1. **One platform and database support document, data and process management** with built-in capabilities, such as security controls, audit trails, third-party integration and more

2. **Present information to business users via a variety of access methods,** including desktop clients, dashboards, web browsers, email inboxes and even mobile devices

3. **Rapidly point-and-click configure business applications** that support case-driven work, scaling the OnBase platform to solve business problems across your organization
